Practical AI, automation and data systems for Texas organizations.

AKETEC is a Texas engineering firm serving businesses and the public agencies and prime contractors that support them. We build the AI operations that handle repetitive administrative work, modernize the fragmented data underneath it, and help government and public organizations adopt AI and legacy systems responsibly. Every engagement begins with a fixed-price assessment that quantifies current cost before any build is proposed. All work is performed in the United States by US persons.

CORE COMPETENCIES

AI Operations & Automation

- AI voice reception, intake and scheduling automation
- Workflow automation and system-to-system integration
- Internal AI assistants and document intelligence

Data Modernization & Intelligence

- Data migration, SQL/database modernization and ETL pipelines
- System integration and AI-ready data architecture
- Business intelligence, dashboards and reporting

Public Sector Modernization

- Legacy application modernization and migration
- AI system inventories and data governance
- Audit-ready delivery from assessment through implementation

DIFFERENTIATORS

- **Senior engineers deliver the work.** The engineer who assesses your systems builds the fix. Nothing is handed to a junior bench after award.
- **We quantify before we recommend.** Automation is easy to sell and easy to get wrong. Every recommendation rests on measured current cost.
- **Fixed price, fixed scope, documented deliverable.** Priced and bounded before we start. Growth in scope becomes a new engagement, not an open clock.
- **Deliverables written to your frameworks.** Output is formatted against the modernization and governance frameworks your agency already reports under.
- **US-based delivery, US persons only.** No offshore development and no subcontracted delivery to unnamed third parties.

KEY PERSONNEL & RELEVANT EXPERIENCE

Ernesto D. Herbert, Founder / CEO — M.S. Data Science, George Washington University. MCSE: Data Platform · Oracle Database Administrator · ITIL v3. Fifteen years engineering data systems across healthcare, aerospace, telecommunications, and political technology.

Automation in production

Automated client data onboarding and SQL transformation workflows at a national political-data platform, cutting manual processing time 30% and accelerating client go-live timelines.

Regulated data, fully auditable

Reconciliation and data-quality systems for Medicare reimbursement data (APC, DRG, ESRD, ASC) achieving 100% auditability across complex regulatory datasets.

Legacy modernization at scale

Star-schema warehouses and SSIS/SSRS pipelines integrating mainframe and non-mainframe systems for aerospace production analytics; multi-terabyte Oracle and SQL Server administration.

Records integrity engineering

Introduced hashing and audit-trail mechanisms into enterprise ETL pipelines; architected a Hyperledger Besu network with zk-SNARK identity for verifiable, immutable records.
