+1 (240) 495-8592

Practical AI, automation and data systems for Texas organizations.

AKETEC is a Texas engineering firm serving businesses and the public agencies and prime contractors that support them. We build the AI operations that handle repetitive administrative work, modernize the fragmented data underneath it, and help government and public organizations adopt AI and legacy systems responsibly. Every engagement begins with a fixed-price assessment that quantifies current cost before any build is proposed. All work is performed in the United States by US persons.

CORE COMPETENCIES

AI Operations & Automation

- AI voice reception, intake and scheduling automation
- Workflow automation and system-to-system integration
- Internal AI assistants and document intelligence

Data Modernization & Intelligence

- Data migration, SQL/database modernization and ETL pipelines
- System integration and AI-ready data architecture
- Business intelligence, dashboards and reporting

Public Sector Modernization

- Legacy application modernization and migration
- AI system inventories and data governance
- Audit-ready delivery from assessment through implementation

COMPANY EXPERIENCE — PLATFORMS & CLIENT WORK

Built by AKETEC — AI, data infrastructure & verifiable records

Scribb *(in production).* Institutional record-keeping platform: financial records, board decisions, contracts and compliance files, with AI that flags risks and deadlines, audit-ready reporting and tamper-evident proof. scribb.net

Nuru *(in production).* AI-assisted mobile platform on Google Play and the App Store: AI assistant, secure messaging and a digital wallet. nuru.si

Alkebuleum Network *(in production).* Distributed-ledger network built and operated by AKETEC; tamper-evident, independently verifiable records. alkescan.com

DRIS *(in development).* Issuing and verifying diplomas, deeds, certificates and public records. dris.cc

Client work

Liberian Association of Austin Texas (LAAT). Designed, built and manages the nonprofit's platform: membership tiers and dues, events and RSVPs, scholarship and welfare programs, a financial transparency portal and a member workspace. laataustin.org

Open source

Contributions in digital ledger technology and sovereign AI, including Nuru Sovereign Runtime (model-agnostic sovereign AI runtime, v0.1 prototype) and AmVault Connect. Our code is public because our claims should be checkable. github.com/aketec-systems · github.com/Alkebuleum

DIFFERENTIATORS

- **Senior engineers deliver the work.** The engineer who assesses your systems builds the fix. Nothing is handed to a junior bench after award.
- **We quantify before we recommend.** Automation is easy to sell and easy to get wrong. Every recommendation rests on measured current cost.
- **Fixed price, fixed scope, documented deliverable.** Priced and bounded before we start. Growth in scope becomes a new engagement, not an open clock.
- **Deliverables written to your frameworks.** Output is formatted against the modernization and governance frameworks your agency already reports under.
- **US-based delivery, US persons only.** No offshore development and no subcontracted delivery to unnamed third parties.

KEY PERSONNEL

Ernesto D. Herbert, Founder / CEO — M.S. Data Science, George Washington University. MCSE: Data Platform · Oracle Database Administrator · ITIL v3. Fifteen years engineering data systems across healthcare, aerospace, telecommunications, and political technology.

FOUNDER'S PRIOR EXPERIENCE — PERFORMED IN PREVIOUS ROLES, BEFORE AKETEC

Automation in production

Automated client data onboarding and SQL transformation workflows at a national political-data platform, cutting manual processing time 30% and accelerating client go-live timelines.

Regulated data, fully auditable

Reconciliation and data-quality systems for Medicare reimbursement data (APC, DRG, ESRD, ASC) achieving 100% auditability across complex regulatory datasets.

Legacy modernization at scale

Star-schema warehouses and SSIS/SSRS pipelines integrating mainframe and non-mainframe systems for aerospace production analytics; multi-terabyte Oracle and SQL Server administration.

Records integrity engineering

Introduced hashing and audit-trail mechanisms into enterprise ETL pipelines; architected a Hyperledger Besu distributed-ledger network with zero-knowledge identity verification for verifiable, immutable records.
