

Records systems that can prove what they hold.

AKETEC is a Texas software engineering firm working exclusively in the public sector. We modernize legacy applications and the data inside them, establish the governance that makes AI adoption defensible, and design the cryptographic controls that let a records system demonstrate its contents have not been altered. Every engagement is fixed-price and scoped in advance, and all work is performed in the United States by US persons.

CORE COMPETENCIES

Legacy Application Modernization

- Current-state assessment and technical debt inventory
- Data migration with lineage preservation
- Incremental replatforming and phased cutover

Security Engineering & Assessment

- Application security review and threat modeling
- Secure development lifecycle implementation
- Remediation engineering and verification

Data Governance & AI Readiness

- Data inventory, classification, and lineage mapping
- AI and automated-decision system inventories
- Governance gap registers and remediation sequencing

Verifiable Records Engineering

- Tamper-evident logging and append-only ledgers
- Cryptographic provenance and chain of custody
- Credential and document verification systems

DIFFERENTIATORS

- **Senior engineers deliver the work.** The engineer who assesses your system writes the remediation. Nothing is handed to a junior bench after award.
- **Fixed price, fixed scope, documented deliverable.** Priced and bounded before we start. Growth in scope becomes a new engagement, not a change order against an open clock.
- **Deliverables written to your frameworks.** Output is formatted against the modernization and governance frameworks your agency already reports under.
- **Verifiable-records depth.** Cryptographic provenance and tamper-evident design are a specialty, not a slide.
- **US-based delivery, US persons only.** No offshore development and no subcontracted delivery to unnamed third parties.

KEY PERSONNEL & RELEVANT EXPERIENCE

Ernesto D. Herbert, Founder / CEO — M.S. Data Science, George Washington University. MCSE: Data Platform • Oracle Database Administrator • ITIL v3. Fifteen years engineering data systems across healthcare, aerospace, telecommunications, and political technology.

Records integrity in production

Introduced hashing and audit-trail mechanisms into enterprise ETL pipelines for a national political-data platform; automated onboarding and SQL transformation, cutting manual processing time 30%.

Legacy modernization at scale

Star-schema warehouses and SSIS/SSRS pipelines integrating mainframe and non-mainframe systems for aerospace production analytics; multi-terabyte Oracle and SQL Server administration.

Regulated data, fully auditable

Reconciliation and data-quality systems for Medicare reimbursement data (APC, DRG, ESRD, ASC) achieving 100% auditability across complex regulatory datasets.

Verifiable records, in production

Architected a Hyperledger Besu proof-of-authority network with zk-SNARK decentralized identity and zkEVM Layer 2, with off-chain PostgreSQL and IPFS sync for immutable records.

CORPORATE DATA

REGISTERED LEGAL ENTITY
Alkebuleum Technology LLC

UNIQUE ENTITY ID (UEI)
Pending SAM.gov registration

BUSINESS TYPE
Small business • LLC • State of Texas • Est. 2024

NAICS
541511 (primary) • 541512 • 541519 • 541611 • 541690 • 518210

CONTRACT TYPES
Firm-fixed-price • Labor-hour • T&M • Prime or subcontractor

PRINCIPAL OFFICE
Hutto, Texas 78634

OPERATING NAME
AKETEC

CAGE CODE
Pending SAM.gov registration

REGISTRATIONS
SAM.gov and Texas CMBL in progress

PSC
DA01 • DF01 • DJ01 • DC01

COVERAGE
State of Texas • Nationwide remote delivery

POINT OF CONTACT
Ernesto Herbert, Founder / CEO • info@aketec.com

Insurance: general liability, professional liability (E&O), and cyber liability bound prior to contract award. Certificates furnished on request.

SMALL BUSINESS • TEXAS • US PERSONS ONLY
